Set Up UAWiFi on an Apple Device

1. Make sure your device’s Wi-Fi is turned on.
   a. If you need to do that, from the Home screen navigate to Settings > Wi-Fi.

2. Select UAWiFi.
   a. If this is the first time you’re connecting to the network, the UAWiFi option only shows if you’re within range of the signal.

3. If presented with the Certificate screen, select Trust (at the top). This confirms you’re connecting to a known and safe network.

4. Enter your NetID (Username) and NetID password (Password).

5. Once you connect to UAWiFi the first time, you should only need to enter your username and password again if you have a new device or change your NetID or NetID password.
